

Skill and Job Recommender

Assignment - 1

Name : Naveenraj S

Assignment Date : 27th Oct '22

Question :

Create a registration page with username, email, password and by using the POST method display it in the next page.

App.py :

```
from flask import Flask, render_template, url_for, redirect, flash, session, request
import ibm_db as db
from classes import forms
from config import Config

app = Flask(__name__)
app.config.from_object(Config)

conn =
db.connect("DATABASE=bludb;HOSTNAME=???;PORT=???;Security=SSL;SSLServerCertificate=/
Users/shady/Documents/Projects/x64py/Job recommender/untitled
folder/DigiCertGlobalRootCA.crt;UID=???;PWD=???", "", "")

@app.route('/register', methods=['GET', 'POST'])
def register():
    form = forms.register()
    if(request.method == 'POST'):
```

```

if(form.validate_on_submit()):
    name = request.form['name']
    uname = request.form['uname']
    pwrld = request.form['pwrld']
    email = request.form['email']
    sql = "insert into users values(?,?,?,?)"
    stmt = db.prepare(conn,sql)
    db.bind_param(stmt,1,name)
    db.bind_param(stmt,2,uname)
    db.bind_param(stmt,3,email)
    db.bind_param(stmt,4,pwrld)
    db.execute(stmt)
    print('yes')

flash('You are successfully registered! You can login now')
return redirect(url_for('login'))
return render_template('register.html',form=form)

```

Classes/forms.py :

```

from flask_wtf import FlaskForm

from wtforms import StringField,SubmitField,PasswordField,EmailField

from wtforms.validators import DataRequired, Length , Email

class register(FlaskForm):

    name = StringField('Enter Name',validators=[DataRequired()])

    uname = StringField('Enter Username',validators=[DataRequired()])

    pwrld = PasswordField('Enter Password',validators=[DataRequired(),Length(min=8)])

```

```
email = EmailField('Enter Email',validators=[DataRequired()])
```

```
submit = SubmitField('Sign up')
```

Templates/register.html :

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<meta charset="utf-8">
```

```
<meta name="viewport" content="width=device-width, initial-scale=1">
```

```
<link rel="stylesheet" type="text/css" href="{% url_for('static',filename='css/register.css') %}">
```

```
<title>Register
```

```
</title>
```

```
</head>
```

```
<body>
```

```
<div>
```

```
<h2>Sign up!!</h2><br>
```

```
<form method = 'POST'>
```

```
{{ form.hidden_tag() }}
```

```
<div>
```

```
{{ form.name(placeholder='Enter your Name') }}
```

```
</div>
```

```
<br>
```

```
<div>
```

```
{{ form.email(placeholder='Enter Email') }}
```

```
</div>
```

```
<br>
```

```
<div>
```

```
{{ form.uname(placeholder='Enter Username') }}
```

```
</div>
```

```
<br>
```

```
<div>
```

```
{{ form.pwrđ(placeholder='Enter password') }}
```

```
</div>
```

```
<br>
```

```
{{ form.submit() }}
```

```
</form>
```

```
</div>
```

```
</body>
```

```
</html>
```

Screenshots :

The screenshot displays the IBM Db2 on Cloud web interface. The top navigation bar includes 'Load Data', 'Load History', 'Tables', 'Views', 'Indexes', 'Aliases', 'MQTs', 'Sequences', and 'Application objects'. The 'Tables' tab is active, showing a list of tables with columns 'Name', 'Schema', and 'Properties'. The 'USERS' table is selected, and its definition is shown in the 'Table definition' panel on the right. The table definition panel includes a 'View data' button.

Name	Data type	Nullable	Length	Scale
NAME	VARCHAR	Y	255	0
UNAME	VARCHAR	Y	255	0
EMAIL	VARCHAR	Y	255	0
PWRD	VARCHAR	Y	255	0
